FS-1300D

MONOCHROME A4 DESKTOP PRINTER

ECOSYS devices are designed to minimise both direct costs,

such as consumables and indirect cost, such as maintenance administration. The cartridge-free system requires only the toner to be replaced. The modular design concept allows you to add workflow enhancing functions and a wide variety of paper handling capabilities as required. Integrated system software provides longterm cross-network compatibility. Kyocera's long-life components cost you and the environment less.

System platform:

The FS-1300D offers USB connectivity as standard and delivers optional network connectivity and problem-free system administration. Kyocera's single platform technology means that the same driver can be used for every Kyocera PCL/PostScript print device on the network; from single-user desktop printers to high-end multifunctional systems.

PRESCRIBE IIe

With the Kyocera page design and control language PRESCRIBE IIe, even complex graphics, logos and forms (including multipart forms) can be created independently of the system and saved and updated in the printer. Consequently, integration into print files no longer applies. They are only accessed as required and therefore relieve the load on the network.

Status Monitor/KM-NET Viewer

The settings of the FS-1300D can be checked visually and amended from any Windows PC, while the Status Monitor ensures easy setup and checking of the printer status via a USB connection. KM-NET Viewer is an advanced printer management software tool using the standardised protocol SNMP.
